

DDS3020 HELICOPTER TRANSMISSION FLUSHING SYSTEMS

- Flushes the transmission system by providing closed-loop hydraulic oil flow where flushing durations can be set directly from the display
- Optimizes filtration with three filters for pressure, suction, and return lines at a 3-micron level
- Includes contamination sensors in the hydraulic system for system health
- Integrated adjustable flow pump meets specific flow rate demands
- The pressure sensor displays real-time data
- The interface allows real-time oil temperature adjustments
- Advanced thermal design in the oil tank enables both heating and cooling as needed
- A user-friendly HMI panel provides a comprehensive view of operational data
- Provides audible and visual alerts for system issues
- Sits on a wheel-based chassis for easy mobility and secure positioning
